MICROMAX SUGAR MILLS ERP · ELP GUIDE

ELP — electronic loading point

A load is registered on the phone where it is loaded, tracked on the road, photographed by the gate cameras, and verified by the ELP auditor before its token is issued.

1 · Register
Indent, vehicle, driver, GPS in geofence.

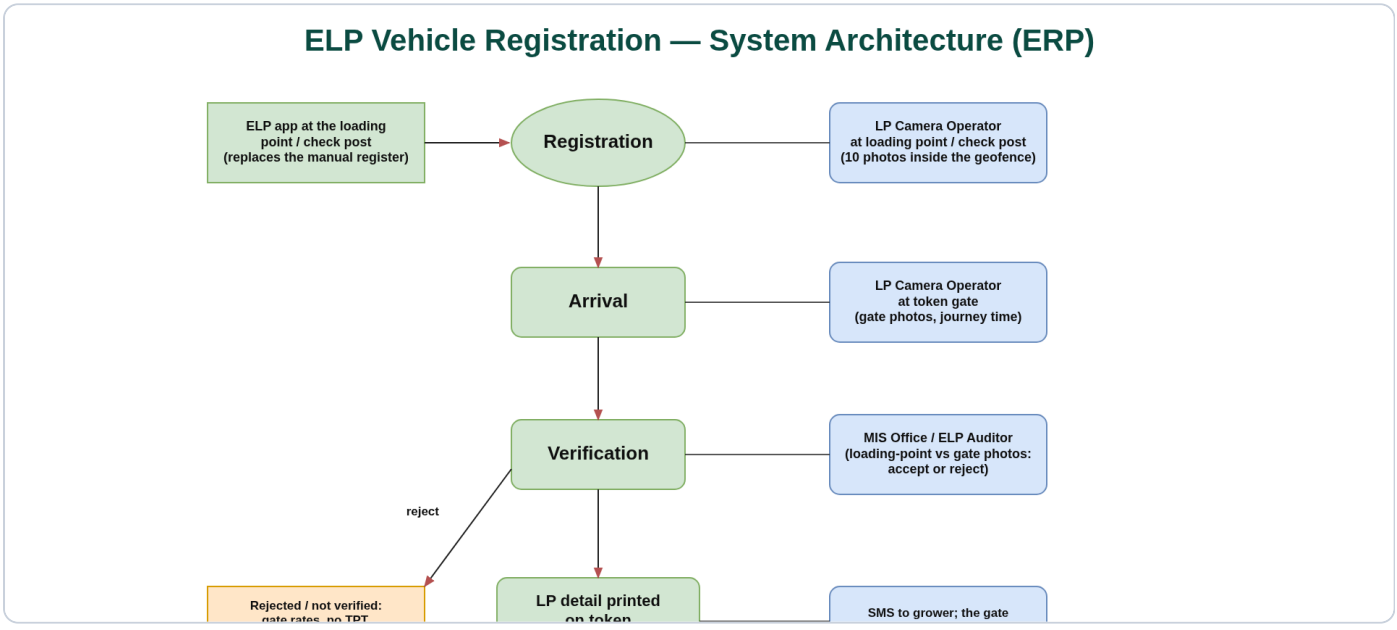

2 · Photos
Ten views of the load.

3 · On the road
Expected arrival; overdue flagged.

4 · Gate
Scan; gate cameras; journey time.

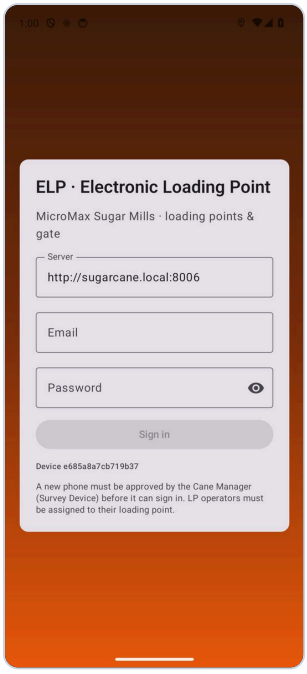

5 · Audit
Accept → ELP-verified token.

Who: **LP Operator** (phone), **Gate** (scan), **ELP Auditor** (compare & verify), **Cane Manager** (dashboard).

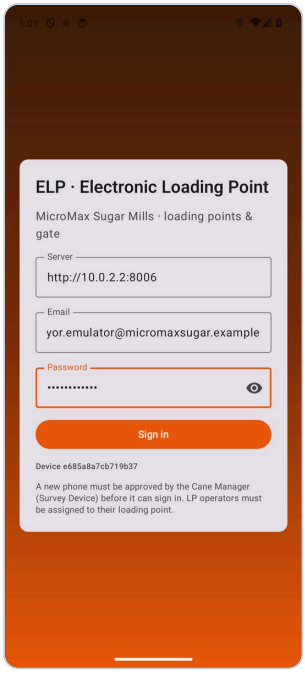

ELP flow — registration, arrival, verification, LP detail on the token.

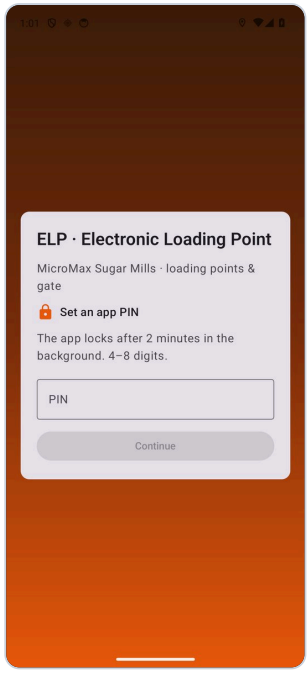

On the phone

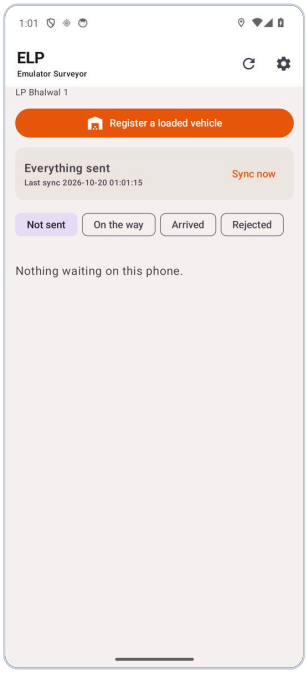

1 · Open ELP — The loading-point operator opens the ELP app.

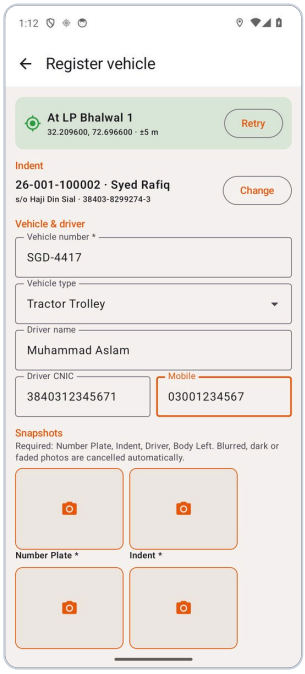

2 · Sign in — Server, e-mail and password. The phone must be approved and the user assigned to a loading point.

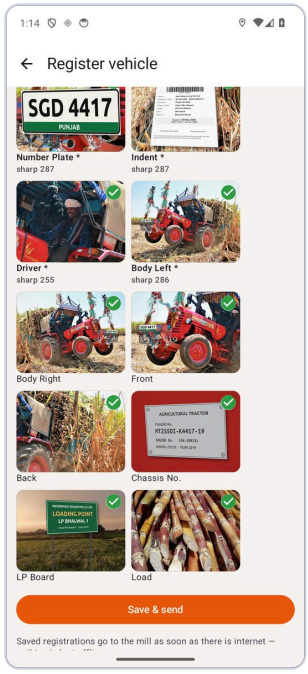

3 · App PIN — The app locks after 2 minutes in the background; the PIN opens it again.

4 · Home · LP Bhalwal 1 — Register a loaded vehicle. Tabs show loads not sent, on the way, arrived and rejected.

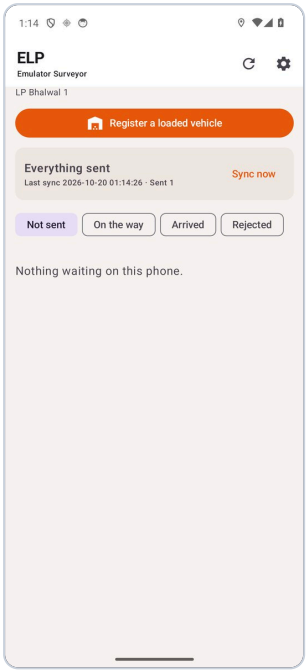

5 · Register the vehicle — GPS inside the loading point's geofence. The grower's indent, tractor trolley SGD-4417 and its driver.

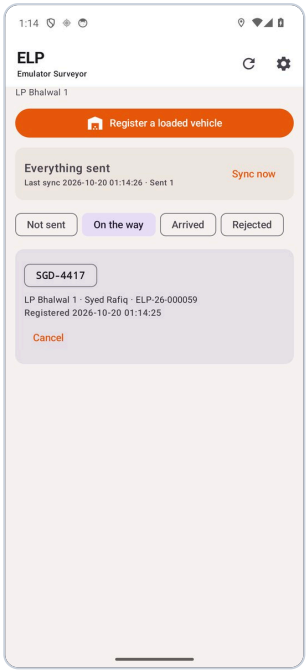

6 · Ten photos of the load — Number plate, indent, driver, both sides, front, back, chassis, LP board and the cane. Blurred or dark photos are refused.

On the phone (continued)

7 · Saved and sent — The registration goes to the mill as soon as there is internet; nothing is lost offline.

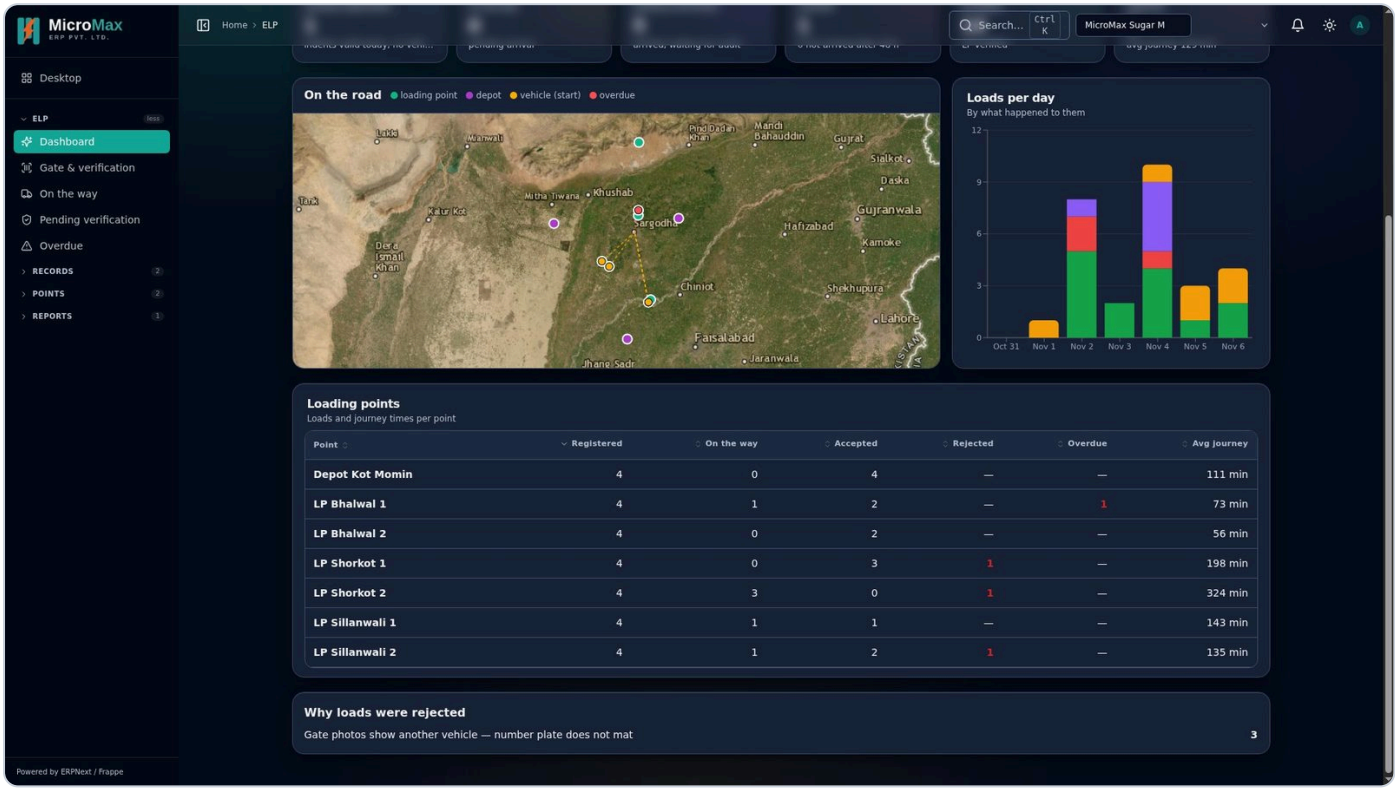

8 · On the way — SGD-4417 from LP Bhalwal 1 for grower Syed Rafiq: ELP-26-000059.

In the office

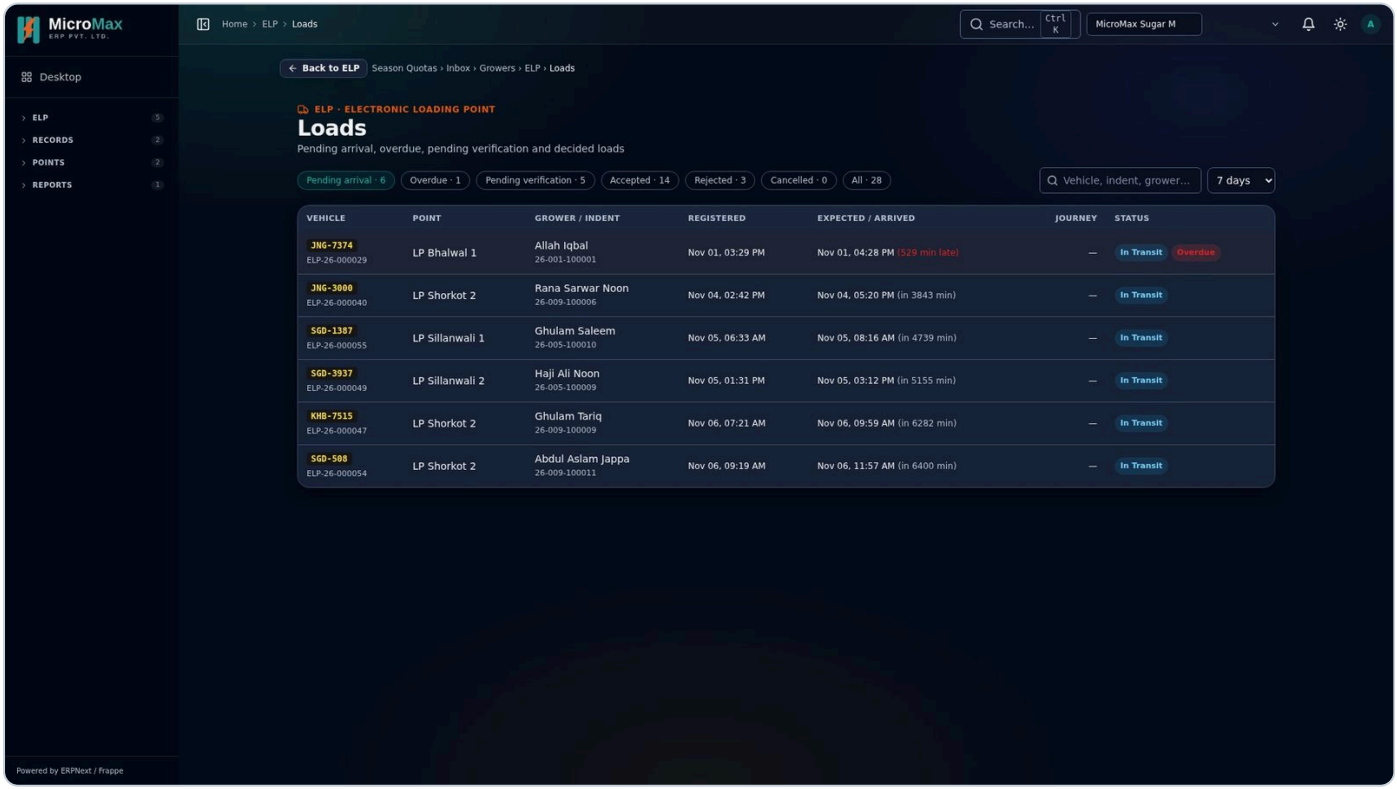

1 · ELP dashboard

Loads on the road on the map, loads per day, loading points with journey times, and why loads were rejected.

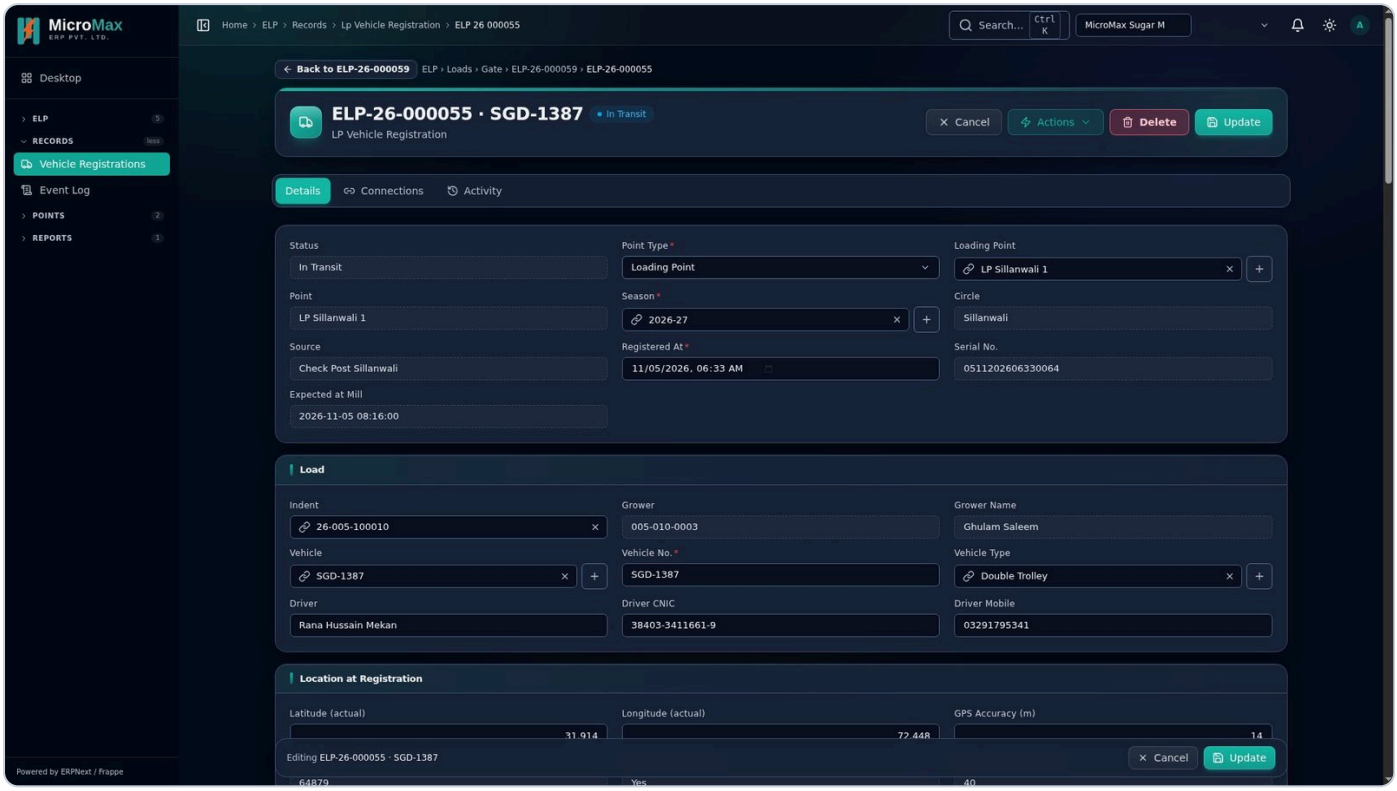

2 · Loads

Pending arrival, overdue, pending verification, accepted and rejected — each with its expected arrival.

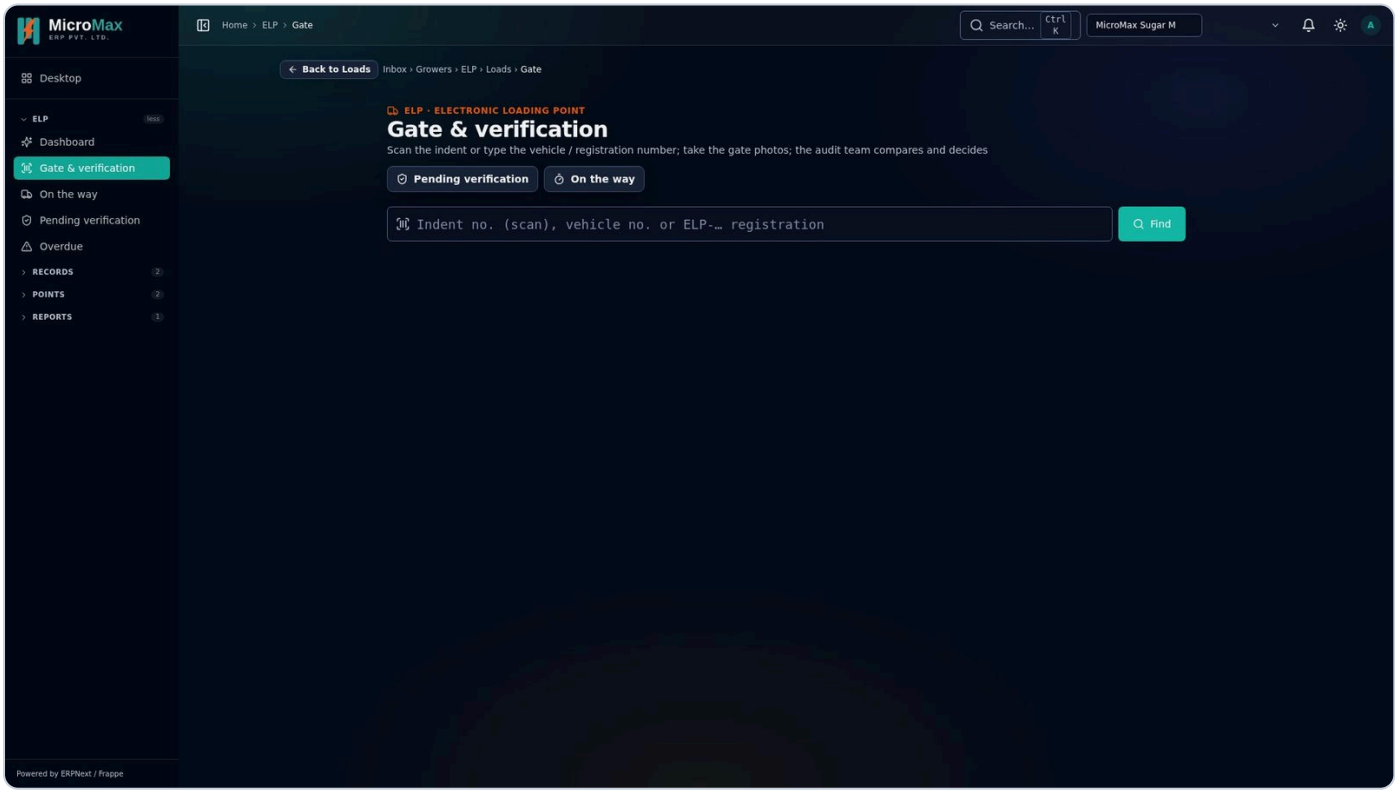

3 · A load in transit

ELP-26-000055 · SGD-1387: loading point, indent, grower, vehicle, driver and the GPS at registration.

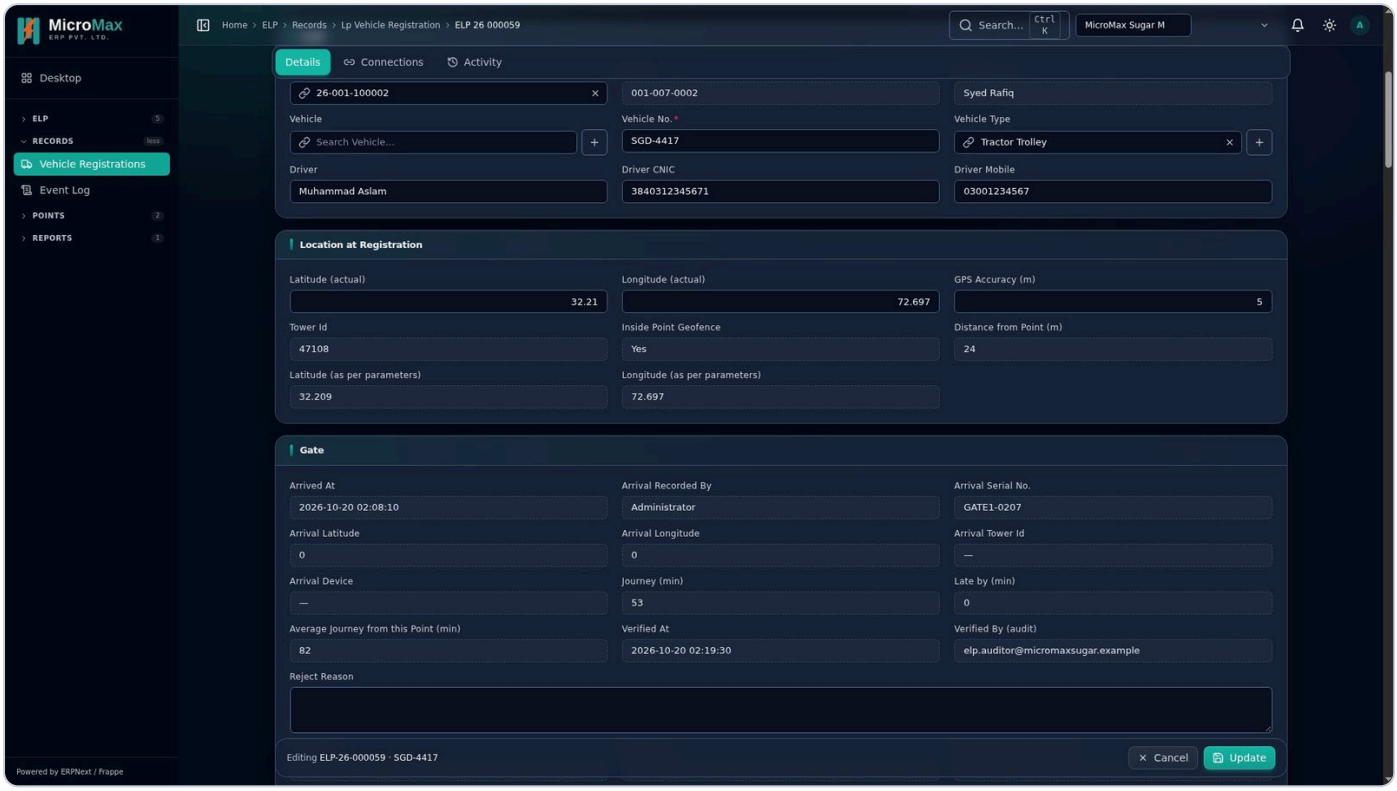

4 · Gate & verification

Scan the indent or type the vehicle / ELP number; the gate cameras take the photos.

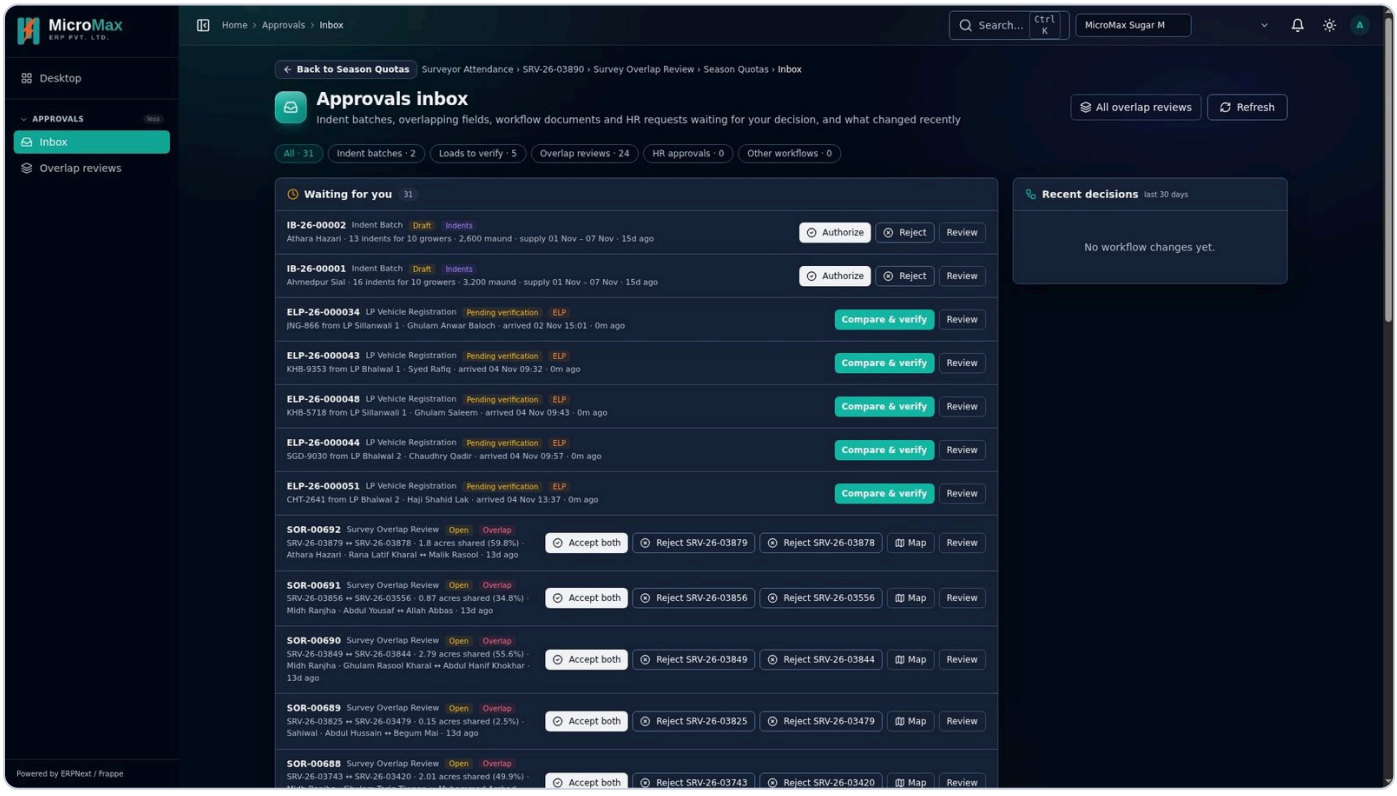

5 · Arrival and audit

Arrival time, journey 53 min against the average 82, the auditor who verified it.

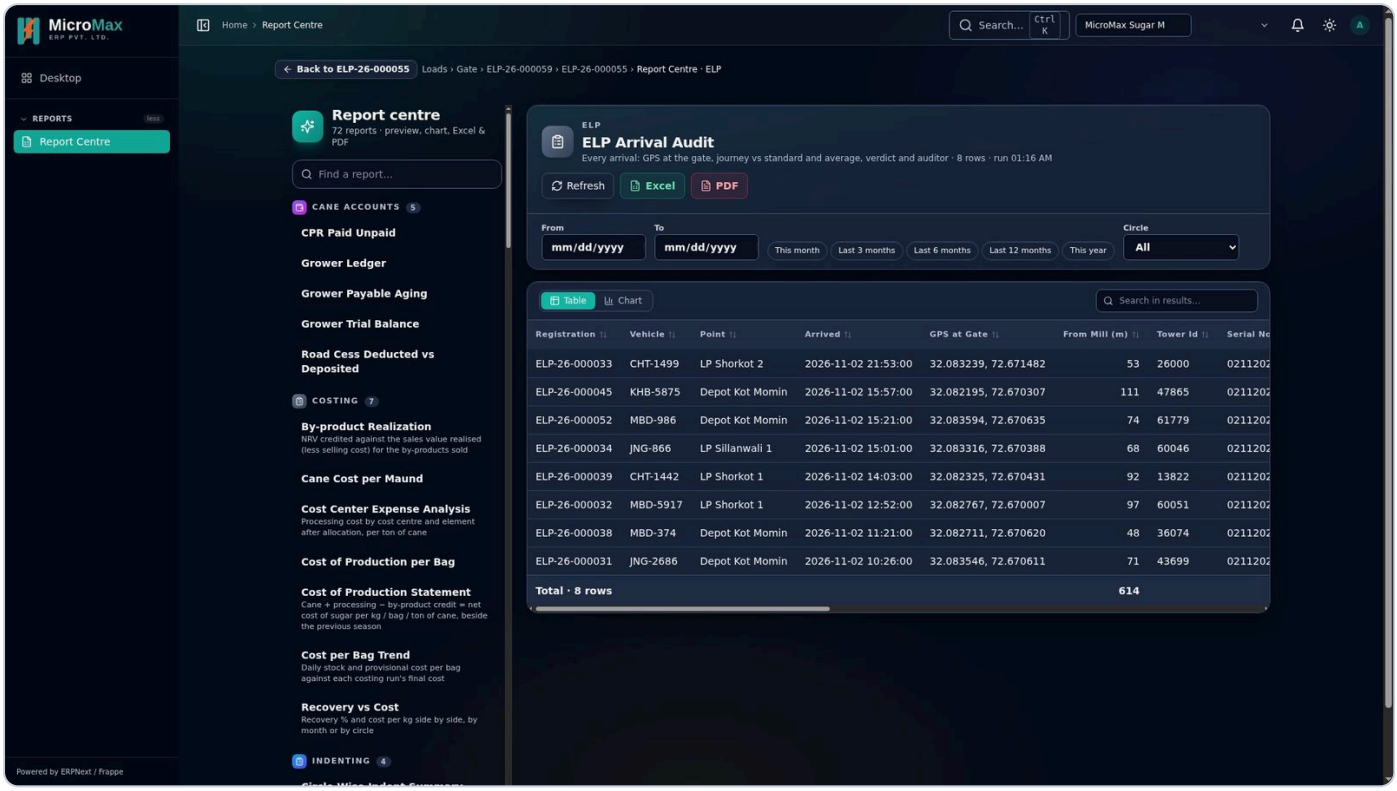

6 · Loads to verify

Arrived loads wait in the approvals inbox: **Compare & verify**, then accept or reject with a reason.

7 · ELP arrival audit

Every arrival: GPS at the gate, journey against standard, verdict and auditor — Excel or PDF.

If something goes wrong

You see	Do this
“Outside the loading point”	Move inside the geofence shown on the phone; ask the Cane Admin to check the LP pin and radius.
Photo refused (blurred or dark)	Hold still, use the flash, take it again.
Indent not valid	The indent is expired, used, or for another loading point.
Load shows *Overdue*	Call the driver; the auditor sees the delay when verifying.
Rejected at the audit	The load comes in at gate rates; the reason shows on the dashboard.

Screens from the MicroMax test system with demo data (2 November 2026).
